INTRODUCTION

Aksa is committed to providing the most effective solution to the Data Center industry with the power it takes from engineering, production, distribution, and customer-oriented experience and knowledge. We are constantly improving designs, products and infrastructure to offer the highest level of reliability for Emergency Power Systems. While serving the industry in hundreds of countries Globally, we design our products and systems in line with the needs of Data Center practitioners at the center of our focus. Aksa generator group provides continuity, reliability and ideal performance for Data Centers. For all generator groups produced, preliminary product testing and factory manufacturing testing are performed according to the Uptime Institute’s Tier Standards.

STANDBY RATING (ESP) Applicable for supplying power to varying electrical load for the duration of power interruption of a reliable utility source. ESP is in accordance with ISO 8528-1. Overload is not allowed.

PRIME RATING (PRP) Applicable for supplying power to varying electrical load for unlimited hours. PRP is in accordance with ISO 8528-1. 10 % overload capability is available for a period of 1 hour within 12-hour period of operation.

Data Center Continuous (DCC) The maximum power which a generating set is capable of delivering while supplying a variable or continuous electrical load and during unlimited run hours. Depending on the sites to supply and the availability of reliable utility.

- Steel structure made from steel sheet and steel profiles.
- Canopy and panels made from powder coated sheet steel.
- Emergency stop push button.
- Control panel is mounted on the baseframe located at the back of the Generator set.
- Cables out locations are back of the canopy.
- Corrosion resistant locks and hinges.
- Oil could be drained via valve and a hose.
- Exhaust system on the canopy.
- Special large access doors for easy maintenance.
- The cap on the canopy provides easy access to radiator cap.
- Lifting points similar to ISO container, located on each top corner of the Canopy.
- Sound proofing materials.
- Fuel tank is at front of the canopy, easy access to the fuel tank via lockable door.
- Integrated ladder built in to side of the canopy allows access to the top of the canopy.

INTRODUCTION

Sound-attenuated and weather protective enclosures for generating sets from Aksa, meet event the sound requirements and provide optimum protection from inclement weather and development by our specialist acoustic engineers. Our modular designed sound insulated canopies provide ease of access for servicing and general maintenance and interchangeable components permitting on-site repair. Enclosures are designed to optimize genset cooling performance, providing you with confidence that genset ratings and ambient capability.
Devices
InteliGen NT Auto Mains Failure control module Static battery charger Emergency stop push button and fuses for control circuits

CONSTRUCTION and FINISH
Components installed in sheet steel enclosure.
Phosphate chemical, pre-coating of steel provides corrosion resistant surface
Polyester composite powder topcoat forms high gloss and extremely durable finish
Lockable hinged panel door provides for easy component access

INSTALLATION
Control panel is mounted generating set baseframe on robust steel stand or power module. Located at side of generating set with proper panel visibility.

GENERATING SET CONTROL UNIT
- 195Vac to 264Vac input voltage range
- 45Hz to 440Hz input supply frequency range
- Capability to work direct from 240Vdc to 365Vdc sup-ply voltage
- 27.6Vdc factory set DC out-put terminal voltage (option up to 29.4Vdc)
- 5.0Adc continuous output current into load
- Capability to work continuously into short-circuit
- Parallel connection for higher output current rating and redundant operation
- Series connection capability for higher output voltage requirements
- No cooling fans used for high operational reliability
- Aluminum alloy case for robust handling and easy mounting

STANDARD SPECIFICATIONS
- Comprehensive gen-set controller for both single and multiple gensets Parallel operation up to 32 gen-sets operating in standby or paralleling modes
- To be used in conjunction with detachable colour displays InteliVision 5 or InteliVision 8
- Support of engines with ECU (Electronic Control Unit)
- Complete integrated gen-set solution and signal sharing via CAN bus – minimum external components needed
- Many communication options – easy remote supervising and servicing
- Load sharing and VAr sharing via CAN Virtual shared inputs and outputs via CAN Support of wide range of applications
Single or multiple gen-sets in parallel to mains operation with automatic back up function, multiple island operation

Advanced power management function

Customizable load control in parallel to mains

Wide range of ECU support

Highly configurable

Timers, Internal PLC, Force values and more

Active e-mail messaging and SMS with optional communication module

Stop, Manual, Automatic, Test, Start, Silent / Lamp test,

Automatic synchronization and power control AMF function, Baseload, Import / Export, Peak shaving, Voltage and PF kontrol (AVR)

True RMS (TRMS) is used with Voltage, Current and Power measurement

**Instruments**

**ENGINE**

- Engine Speed
- Oil Pressure
- Water Temperature
- Engine Running Hours
- Battery Voltage
- Maintenance Plan

**GENERATOR**

- Voltage (L-L, L-N)
- Current (L1-L2-L3)
- Frequency
- Earth leakage
- kW
- Power Factor
- kVAR
- kWh, kVAh, kVARh

**MAINS**

- Voltage (L-L, L-N)
- Frequency

**PROTECTION CIRCUITS**

- Charge failure
- Low Battery Voltage
- Stop Failure
- Low Fuel Level (ops)
- Overload kW
- Reverse phase sequence
PRE-ALARMS
- Low Oil Pressure
- High engine temperature
- Low Engine Temperature
- Low / High engine speed
- Low / High generator frequency
- Low / High generator voltage
- ECU warning

STOP ALARMS
- Start failure
- Emergency stop
- Low oil pressure
- High engine temperature
- Low water level
- Low / High engine speed
- Low / High generator frequency
- Low / High generator voltage
- Oil pressure sensor open circuit
- Phase direction

Options
- High oil temperature - Shutdown
- Low fuel level - Shutdown
- Low fuel level - Alarm
- High fuel level - Alarm
- Customizable load control in parallel with the network
- Wide range of ECU support
- Highly configurable
- Timers, Internal PLC, Force values and more are compatible with ComAp's InteliVision displays
- Active e-mail messaging and SMS with communication module

STATIC BATTERY CHARGER

Manufacturer reserves the right to make change in the model, technical specifications, color, equipment, accessories and images without prior notice. (09.04.2020)
EBC 2405M is designed and optimized for charging all types of Lead Acid batteries (including jell type sealed Lead Acid batteries), protecting the battery and extending its useful life time.

EBC 2405M can deliver continuous charging current of 5A into 24V battery system (voltage is set to 27.6Vdc, with an option of up to 29.4Vdc) These battery chargers are designed with performance in mind and special care is taken for protecting and extending the life-time of the battery.

EBC 2405M is designed with “Switched Mode” technology, where the switching transistor has only two states, ON or OFF, which increases the overall efficiency, hence reduces the excess heat dissipation and in return, increasing the device life-time and reliability.

The control system is also designed in such a way that; battery is charged in three stages:

- **Constant current mode (protection)** (protecting battery cells)
- **Constant voltage mode** (reducing the charge current)
- **Float charge** (compensation of internal self-discharge)

Constant current mode makes sure that; when the battery is drained down below its rated capacity, the high charge current flow into the battery is limited in order to protect the cells and reduce damage to the plates.

As the battery capacity is recovered, each cell voltage reaches up to 2.30Vdc to 2.45Vdc level, which means that the required charging current starts to reduce.

When the required battery terminal voltage is fully reached, the charger keeps supplying just enough current in order to compensate for the internal self-discharge (float charge). This ensures that the battery can maintain its high charge state and deliver its rated output current, when ever required.

**STANDARD SPECIFICATIONS**

- Water cooled diesel engine
- Radiator and mechanical fan
- Protective cage to prevent rotating and touching hot parts
- Electric starter and charge alternator
- Battery (lead acid), cables and stand
- Engine block water heater
- Steel chassis and anti-vibration wedges
- Fuel tank separate from the group (Açıksız group)
- Flexible fuel connection hoses
- Alternator with single bearing and H insulation class
- Industrial capacity muffler and flexible steel compensator
- Electronic battery charger
- Operating and installation instructions
- The frequency and voltage regulation of the groups lifts 100% load according to NFPA110 in accordance with ISO 8528-5.

**OPTIONAL EQUIPMENTS**

- Remote radiator cooling
- Fuel-water separator filter
- Oil heater

**ALTERNATOR**

- Anti-condensation heater
- Bigger Power rate alternator

Manufacturer reserves the right to make change in the model, technical specifications, color, equipment, accessories and images without prior notice. (09.04.2020)
### Output Breaker

#### CONTROL PANEL
- Automatic synchronization and power control system (multiple parallel generator)
- Continuous parallel system with the network
  - Network synchronization system
  - Remote communication and control

#### Remote alarm panel
- Alarm output relays
  - Earth leakage, single generator

#### Charging ammeter

#### TRANSFER BOARD
- Three or four-pole ATS system
- Three or four-pole motorized output breaker

#### AUXILIARY EQUIPMENT
- Main Fuel Tank
  - Automatic or manual fuel filling system
- Oil drain, electric pump
  - Low and high fuel level alarm
- Exhaust muffler, built-in type
  - Enclosure cabinet; soundproof type or open area type
- Air duct adapter (radiator front)
- Motorized roller shutter (air inlet and outlet circuit)
- Soundproof duct (air inlet and outlet circuit)
- Tool kit (for maintenance)
  - Maintenance kit for 1500/3000 working hours
  - Antifreeze and engine lubricating oil (for -30 °C ambient temperature)

### AKSA CERTIFICATES
- ISO 14001-2004
- TS ISO 8528
- TS ISO 9001-2008
- CE
